

Divya Jain

Python Developer | Backend Systems | Distributed Architecture & Cloud

divyajain112002@gmail.com | +91-8878754565 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Software Engineer with 3+ years of experience in designing, developing, and maintaining backend applications using Python. Skilled in backend development, **RESTful API** development, database optimization, **JWT-based authentication**, authorization, **Role-Based Access Control (RBAC)**, and **third-party API integrations**. Experienced in delivering software solutions across the complete Software Development Life Cycle (SDLC), from requirement analysis to production deployment.

Proficient in **Python, Django, Django REST Framework (DRF), PostgreSQL, Redis, RabbitMQ, Celery, Docker, AWS, Git, CI/CD, SQL, JavaScript**, and application performance optimization. Proven track record of delivering 30+ features, resolving 90+ application issues across QA and production environments, and collaborating with cross-functional teams and global stakeholders in Agile environments.

TECHNICAL SKILLS

Core Python: Python (OOP, Standard Data Structures), Exception Handling, Asyncio, Scripting
Backend Frameworks: Django, Django REST Framework (DRF), RESTful API Design, MVC/MVT Architecture
Security & Access Control: JWT Authentication, User Authorization, Role-Based Access Control (RBAC)
Asynchronous & Messaging: Celery, RabbitMQ, Distributed Task Queues, Event-Driven Architecture
Database & Analytics: PostgreSQL, MySQL, Redis (Caching), Apache Superset, Query Optimization, Advanced SQL
Cloud DevOps: AWS (EC2, Security Groups), Docker, Docker Compose, Git, GitHub Actions
Frontend Ecosystem: React, JavaScript (ES6+), HTML5, CSS3, Data Visualization (ECharts)

PROFESSIONAL EXPERIENCE

Software Engineer | Ksolves India Pvt. Ltd.

Nov 2022 – Present

Enterprise Telecom Software Platform (Client Project)

Tech Stack: Python, PostgreSQL, SQL, REST APIs, JavaScript, XML, Apache Superset

- **Backend Development:** Developed and maintained backend functionalities using **Python**, PostgreSQL, JavaScript, and REST APIs for an enterprise telecom software platform supporting business-critical workflows.
- **Feature Ownership:** Delivered **30+ features and enhancements**, collaborating with global stakeholders across the complete **Software Development Life Cycle (SDLC)** from requirement analysis to production deployment.
- **Database Optimization:** Optimized complex PostgreSQL queries for analytical dashboards, reducing execution time from **1 minute to approximately 3 seconds** and significantly improving reporting performance.
- **Analytics & Dashboards:** Designed and enhanced interactive dashboards using **Apache Superset** and **ECharts**, enabling business analytics through dynamic visualizations and reporting.
- **Security & Access Control:** Implemented **Role-Based Access Control (RBAC)**, user authorization, and record-level security to ensure secure access to sensitive enterprise data.
- **API Integration & Production Support:** Integrated third-party REST APIs and resolved **90+ application issues** across QA and production environments through debugging, root cause analysis, validation, and deployment support.
- **Code Quality & Application Security:** Improved application maintainability by resolving **SonarQube** code quality findings and remediating high- and medium-severity **security vulnerabilities**, including access control, dependency, endpoint, and input validation issues.

Enterprise Product Engineering

Tech Stack: Python, PostgreSQL, SQL, JavaScript, XML

- **Backend Development:** Developed and customized backend features for enterprise applications using **Python**, PostgreSQL, JavaScript, and XML.
- **Business Logic & Security:** Implemented business workflows, validations, reports, and role-based access control mechanisms to improve application functionality and reliability.

- **Client Collaboration:** Worked directly with international clients to gather requirements, demonstrate solutions, estimate enhancements, and deliver validated implementations.
- **Application Support:** Debugged and resolved complex application issues through root cause analysis, contributing to product stability and continuous improvements

Software Developer Intern

Tech Stack: Python, Django, Django REST Framework, PostgreSQL

- **Backend Development:** Developed backend modules using **Django** and **Django REST Framework**, implementing notifications, email templates, Django Signals, and REST APIs.
- **Team Collaboration:** Collaborated with senior developers on feature development, debugging, testing, code reviews, and Agile sprint deliveries.

ACHIEVEMENTS

- **Star Performer Award** – Recognized for consistent high performance, ownership, and delivering impactful business solutions.
- **Best Developer Award** – Awarded for exceptional technical excellence, quality of deliverables, and contribution to enterprise projects.
- **Rising Star Award** – Recognized for outstanding learning, rapid growth, and early contributions to business-critical applications.

FEATURED PROJECT

Multi-Vendor E-Commerce Platform

Independent Full-Stack Engineering Project | [Live Demo](#) | [GitHub](#)

Tech Stack: Python, Django, Django REST Framework, React, PostgreSQL, Redis, RabbitMQ, Celery, Docker, AWS EC2, GitHub Actions, Razorpay

- **Application Development:** Designed and developed a production-ready full-stack e-commerce platform with customer and seller workflows using **Django, REST Framework and React**.
- **Authentication & Authorization:** Implemented **JWT Authentication, Role-Based Access Control (RBAC)**, and secure REST APIs for user, product, cart, and order management.
- **Payment Integration:** Integrated **Razorpay payment gateway** with secure order creation and payment verification for online transactions.
- **Performance & Asynchronous Processing:** Improved application performance using Redis caching and **Celery with RabbitMQ** for asynchronous background task processing.
- **Deployment & DevOps:** Containerized the application using **Docker, deployed it on AWS EC2**, served the application with Gunicorn, and automated deployments using **GitHub Actions**.

EDUCATION

B.Tech — Information Technology

2019 – 2023

Chameli Devi Group of Institutions, Indore, Madhya Pradesh
