

Divya Jain

Python Backend Developer | Django | REST APIs | SQL Optimization

divyajain112002@gmail.com | +91-8878754565 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Software Engineer with 3+ years of experience in designing, developing, and maintaining backend applications using Python. Skilled in backend development, **RESTful API** development, database optimization, **JWT-based authentication**, authorization, **Role-Based Access Control (RBAC)**, and **third-party API integrations**. Experienced in delivering software solutions across the complete Software Development Life Cycle (SDLC), from requirement analysis to production deployment.

Proficient in **Python, Django, Django REST Framework (DRF), PostgreSQL, MySQL, Redis, RabbitMQ, Celery, Docker, AWS, Git, CI/CD, SQL, JavaScript**, and application performance optimization. Proven track record of delivering 30+ features, resolving 90+ application issues across QA and production environments, and collaborating with cross-functional teams and global stakeholders in Agile environments.

TECHNICAL SKILLS

Core Python: OOP, Exception Handling, Memory Management, Multithreading, Multiprocessing, AsyncIO

Backend: Django, Django REST Framework (DRF), RESTful API Design, MVT Architecture

Security: JWT Authentication, User Authorization, Role-Based Access Control (RBAC)

Messaging: Celery, RabbitMQ, Distributed Task Queues, Event-Driven Architecture

Database: PostgreSQL, MySQL, Redis (Caching), Apache Superset, SQL Query Optimization

Cloud DevOps: AWS (EC2, Security Groups), Docker, Git, GitHub Actions, CI/CD

Operating Systems: Linux (Ubuntu), Windows

Frontend: React, JavaScript (ES6+), HTML5, CSS3, Data Visualization (ECharts)

PROFESSIONAL EXPERIENCE

Software Engineer | Ksolves India Limited

Nov 2022 – Present

Worked On: Enterprise Telecom Software Platform — A centralized platform for planning, validating, executing, and monitoring software upgrade projects across telecom networks.

- **Backend Development:** Engineered 30+ backend features and enhancements using Python, PostgreSQL, JavaScript, and REST APIs for a business-critical enterprise telecom platform, contributing across the complete Software Development Life Cycle (SDLC) from requirement analysis to production deployment.
- **Business Logic & Security:** Implemented business workflows, validations, reporting modules, Role-Based Access Control (RBAC), user authorization, and record-level security, strengthening application security and enforcing enterprise business rules.
- **Database Optimization:** Optimized a 100+ line PostgreSQL query by eliminating redundant JOINS and restructuring the logic using Common Table Expressions (CTEs), reducing query execution time by approximately 45% and improving analytical dashboard responsiveness.
- **Analytics & Dashboards:** Designed and enhanced interactive dashboards using Apache Superset and ECharts, enabling dynamic business analytics through real-time visualizations and reporting.
- **API Integration:** Integrated third-party REST APIs to automate business workflows and improve interoperability with external enterprise systems.
- **Client Collaboration:** Partnered directly with international clients to gather requirements, demonstrate solutions, estimate enhancement efforts, and deliver validated implementations aligned with business expectations.
- **Application Support:** Resolved 90+ QA and production issues through debugging, root cause analysis, validation, and deployment support, improving application stability and reducing recurring defects.
- **Code Quality & Application Security:** Improved application maintainability by resolving SonarQube code quality findings and remediating high- and medium-severity vulnerabilities related to authorization, dependency management, API endpoints, and input validation.

ACHIEVEMENTS

- **Star Performer Award** – Recognized for consistently delivering high-quality solutions, demonstrating strong ownership, exceeding performance expectations, and contributing to impactful business outcomes.
- **Best Developer Award** – Awarded for exceptional technical excellence, quality of deliverables, and contribution to enterprise projects.
- **Rising Star Award** – Recognized for outstanding learning agility, rapid technical growth, proactive problem-solving, and early contributions to business-critical enterprise applications.

FEATURED PROJECT

Shopio — E-Commerce Platform

Independent Engineering Project | [Live Demo](#) ↗

Stack: Python, Django, Django REST Framework, React, PostgreSQL, Redis, RabbitMQ, Celery, Docker, AWS EC2, GitHub Actions

- **Backend Development:** Engineered a production-ready e-commerce platform with customer and seller workflows, implementing scalable RESTful APIs using Django and Django REST Framework.
- **Authentication & Security:** Implemented JWT Authentication, Role-Based Access Control (RBAC), secure API endpoints, and permission-based access control for user, product, cart, order, and seller management.
- **Order & Payment Processing:** Integrated the Razorpay payment gateway with secure order creation, payment verification, and transaction handling to support end-to-end online purchases.
- **Performance & Asynchronous Processing:** Improved application performance using Redis caching and implemented asynchronous background task processing with Celery and RabbitMQ for email notifications and long-running operations.
- **Deployment & DevOps:** Containerized the application using Docker, deployed it on AWS EC2 with Gunicorn and Nginx, and automated build and deployment workflows using GitHub Actions for continuous delivery.

EDUCATION

B.Tech — Information Technology

2019 – 2023

Chameli Devi Group of Institutions, Indore, Madhya Pradesh
